

PELICAN Ceiling HF

Square extract air diffuser

QUICK FACTS

- Perforated air diffuser front face
- Manages large extract airflows
- Flush design
- Designed for modular suspended ceilings
- Quick Access front face
- Can be combined with ALS commissioning box
- Standard colour White RAL 9003
- 5 alternative standard colours
- Other colours upon request

Technical description

Design

The square PELICAN Ceiling High Flow extract air diffuser consists of a backing box and a perforated air front face. The air front face is hung on hinges on one side and secured by springs on the opposite side. This Quick Access fastening system makes it simpler and quicker to open and close the air front face for installation, commissioning and cleaning.

Materials and finish

The backing box and air front face are made of sheet steel. The connection branch is made of galvanized sheet steel. The interior and exterior surfaces of the air diffuser are painted.

- Standard colour:
 - White semi-gloss, lustre 40, RAL 9003/NCS S 0500-N
- Alternative standard colours:
 - Silver gloss, lustre 80, RAL 9006
 - Grey aluminium gloss, lustre 80, RAL 9007
 - White semi-gloss, lustre 40, RAL 9010
 - Black semi-gloss, lustre 35, RAL 9005
 - Grey semi-gloss, lustre 30, RAL 7037
- Non-painted finish and other colours available on request.

Accessories

Commissioning box:

ALS. The ALS commissioning box is made of galvanized sheet steel and contains a removable commissioning damper, fixed measurement tapping and sound absorbing material*) with reinforced surface layer. Tightness class C on the housing according to SS-EN 12237.

The ALS commissioning box is available with a change in dimension between the inlet and outlet.

*)Fire resistance rated to B-s1,d0 in accordance with EN ISO 11925-2

Frame:

SAR K. For aesthetic installation of a lowered air diffuser.

Adapter:

ADAPTER, for adaptation to various variants and makes of systemized false ceilings: Ecophon, Gyproc, Dampa, etc. Also used for adaptation to optional sizes of lay-in type ceilings, for instance 625 x 625 or 675 x 675. Specification available in separate product sheet for ADAPTER.

Project planning

The PELICAN Ceiling HF is available with square dimensions of 595 x 595 mm in all the connection sizes. This makes the air diffuser very easy to install in modular suspended ceilings with modular dimensions of 600 x 600 mm.

Place the air diffuser onto the T-bar framework, and then secure it to the duct system. See Figure 2.

Installation

To dismantle the front face, insert a thin object, for example a Quick Access card or the equivalent, in between the diffuser face and the diffuser backing box in order to

release the springs. Move the card from the centre out towards the corner, see Figure 1.

The inlet spigot of the air diffuser backing box can be secured to the connecting duct by means of self-tapping screws or a blind rivets. For flush-mounting in fixed ceiling constructions, secure the air diffuser by means of screws into place in the framework through either the sides or top of the backing box.

For mounting in modular suspended ceilings, it is advisable to select air diffusers with outer dimensions of 595 x 595 mm. Position these directly down in the T-bar framework, and then secure them to the duct system or to the commissioning box.

If an ALS commissioning box is used, it must be secured to the building structure by means of hangers or mounting brackets.

The distance between the commissioning box and the air diffuser can be increased by as much as 500 mm without having to lengthen the measuring tubes and damper adjustment cords. See Figure 2.

Commissioning

Commissioning should be carried out with the front face mounted. Pull the measuring tubes and damper adjustment cords out through the front face. Then connect the manometer to the correct measuring tube. Always use the transparent tube for extract air. The rated coefficient of performance of the air diffuser can be used in a calculation to determine the required commissioning pressure. Conclude commissioning by adjusting the damper to the correct blade position, tie a commissioning knot in the damper cords to indicate the damper position.

Measurement accuracy and requirement on straight duct before the commissioning box, see Figure 2. The requirements of straight duct depends on the type of disturbance before the commissioning box. Figure 2 shows a bend, a dimensional change and a T-piece. Other types of disturbances requires at least 2xD straight (D = connection dimension) for measurement accuracy of $\pm 10\%$ of the flow.

The rated coefficient of performance (K-factor) is specified on the identification label of the product and in the relevant commissioning instructions at www.swegon.com.

Maintenance

The air diffuser can be cleaned, if necessary, using lukewarm water with dishwashing detergent added or by vacuum cleaning using a brush nozzle. The duct system can be reached for cleaning after opening the front face. If a type ALS commissioning box is used, swing the front face to the side on its hinges so that you then can grip the handle of the tubular damper casing and rotate it out of its holder. See Figure 3.

Sizing

- Sound pressure level dB(A) applies to rooms with 10 m² equivalent sound absorption area.
- Sound attenuation (ΔL) below is shown in the octave band. Orifice attenuation is included in the values.
- To calculate the sound levels in rooms with other dimensions, please refer to our web software, which can be found at www.swegon.com.

L_w = Sound power level

L_{p10A} = Sound pressure level dB (A)

K_{ok} = Correction for producing the L_w value in the octave band

$L_w = L_{p10A} + K_{ok}$ gives the frequency divided octave band

K_{ok} for Comb 1-3 is applicable with CRM and CLA.

LD = CLA sound attenuator, SP = CRM damper

See also figures on page 7.

Comb. 1 = LD-SP-315 + PELICAN CE HF 2 x 250-600

Comb. 2 = LD-SP-400 + PELICAN CE HF 2 x 315-600

Comb. 3 = LD-SP-400 + PELICAN CE HF 400-600

Sizing diagram

- Sound level dB(A) applies to rooms of 10 m² equivalent sound absorption area.
- To calculate the sound levels in rooms with other dimensions, please refer to our ProAir web software, which can be found at www.swegon.com.

PELICAN Ceiling HF – Extract air

Airflow – Pressure drop – Sound level

- The diagrams illustrate data for the PELICAN Ceiling HF recessed in a ceiling.
- The diagrams should not be used for commissioning.
- The dB(A) values are for rooms with normal acoustic absorption (4 dB room attenuation).
- The dB(C) value is normally 6-9 dB higher than the dB(A) value.

PELICAN CE HF – Overview diagram, size 600x600
